

Managing risks of research misuse associated with grant funding activities

Joint BBSRC, MRC and Wellcome Trust policy statement

David Carr
30 March 2006

wellcometrust

The three organisations

Biotechnology and Biological Sciences Research Council (BBSRC)

- supports basic and strategic biological research
- spend over £330m (\$575m) per annum

Medical Research Council (MRC)

- supports research in all areas of medical and related science
- spend over £450m (\$785m) per annum

Wellcome Trust

- independent biomedical research charity
- spend approx. £450m (\$785m) per annum

Key policy drivers

- Developments in the UK
 - new legislation introduced
 - increasing Parliamentary attention
 - UK Foreign and Commonwealth Office: stakeholder engagement for BTWC meetings in 2005
- Developments in the US
 - awareness of the US political response
 - National Academies' ("Fink") report was influential in informing our thinking

Position statements on terrorist misuse of research

- appropriate systems should be set in place to manage risks of research misuse
- risks must be balanced against benefits
- dissemination of research outcomes is crucial to the scientific enterprise
- importance of international collaboration and training
- the need for self-governance within the scientific community
- commitment to examine our grant funding procedures

Strong existing frameworks

- funding decisions are based on **peer review** by leading experts in the field (external referees and funding committees)
- the host institution is responsible for ensuring that the requirements of all regulatory authorities are met
- advisory mechanisms exist for rare cases where additional ethical and social issues are raised
- actively promote best practice in funded research:
 - guidelines on good practice in research
 - research misconduct policies

Working in partnership

- BBSRC, MRC and Wellcome Trust committed to work together to:
 - examine how funding procedures could be strengthened in light of concerns over research misuse
 - develop a **consistent policy approach** across the three organisations
- work was informed by a **joint consultation exercise** of funding and advisory committee members
 - views of 32 committee members gained
 - recognition of importance of the issue & support for specific guidance, and some procedural changes
- issues were discussed at a joint Royal Society and Wellcome Trust workshop held in October 2004

Joint policy statement

- joint BBSRC, MRC and Wellcome Trust policy statement published in September 2005
- statement sets out agreed changes to policies and procedures in four areas:
 - **guidance for applicants** – introduction of a question on application forms
 - **guidance for referees** – explicit mention of research misuse as an issue to consider
 - **guidance for funding committees** – clear guidance on process for assessing cases where concerns raised
 - **good practice guidelines** – modification to include specific reference to research misuse

The wider context

- these procedural changes aim to help:
 - ensure risks of misuse considered at research proposal stage
 - raise awareness of the issue in scientific community
- fully recognise that these changes will not be sufficient on their own in preventing research being misused
- other processes within the research environment are crucially important, including:
 - governance at institutional level
 - adherence to health and safety regulations
 - appropriate caution in making appointments

Next steps...

- implementation of the agreed changes is underway
- the three organisations will:
 - actively monitor the procedures and keep them under review
 - continue to engage in policy discussions on these issues
- feedback and queries on the policy greatly appreciated
